

Simply Better

The most innovative reflected beam smoke detector in the industry, the System Sensor BEAM200 is a single-ended solution that saves you time and money on open-area and high-ceiling applications.

Easy Installation and Alignment

The BEAM200 combines the transmitter and receiver in one unit, and it includes a reflector that sends the beam back to the detector. This means only one device to install and align, saving you time and money. In addition, a digital alignment display further simplifies the process.

Effortless Testing and Maintenance

Save time on testing and maintenance with easy-to-view red, yellow, and green LED status indications. Furthermore, the BEAM200 is the only beam detector with an integral sensitivity test feature. By using the available RTS451 or RTS151 remote test stations or by activating the feature via the fire alarm control panel, fulfilling NFPA 72 maintenance and test requirements is practically effortless.

Versatility to Meet Your Application Requirements

With six sensitivity levels, including two Acclimate™ sensitivity levels, the detector can be programmed to maximize fire detection

in your environment. This, along with built-in drift compensation, protects your system against false alarms. Plus, accessories that increase the detector's coverage range and angular adjustment capabilities, enable surface mounting, and reduce condensation further expand the detector's flexibility.

Call 800-736-7672 for more information and remember to ask for a free Beam Detector Applications Guide.

Accessories like the heavy-duty multi-mount kit increase the BEAM200's application versatility.

advanced ideas. since 1984.
