

Time for a Change

With the first system-connected CO detectors reaching their end-of-life, someone's going to be making money on replacements. It should be you.

And we've made it easy.

Our new **CO-PLATE Carbon Monoxide Detector Replacement Plate** mounts in seconds for seamless CO detector replacement. And what about the outline of that old, bulky detector? The CO-PLATE perfectly covers the footprint of previously installed detectors for a clean, low-profile finish ideal for commercial and residential applications.

Best of all, the CO-PLATE enables you to upgrade your customers to the award-winning CO1224T with RealTest™ – the first and only functional CO test fully compliant with NFPA 720:2009. Only RealTest enables you to leave the job knowing that the people your system protects are also being protected from deadly CO gas.
