6500-MMK Heavy Duty Mounting Bracket

The **6500-MMK** Heavy Duty Mounting Bracket allows you to mount the reflected beam smoke detector transmitter/receiver unit or reflector unit in locations where building movement and vibration are common. We frequently receive requests for a “sturdier” mounting option for our beam smoke detectors, and this product delivers. Made of 12 gauge stamped steel with locking fasteners,

this bracket was designed for the most demanding environment. The bracket allows for both pan and tilt to match the angle required for your application. The bracket comes equipped with a T-bar that mounts directly to the reflector panel. For mounting to the transmitter/receiver housing, a 6500-SMK (surface mount kit) backbox is required and must be ordered separately. For more information, visit www.systemsensor.com

advanced ideas. since 1984.
