

PipeIQ® Software for FAAST Fire Alarm Aspiration Sensing Technology®

PipeIQ Overview

What is PipeIQ?

PipeIQ is the all-in-one system design, configuration and monitoring software for the System Sensor FAAST aspirating smoke detector. It guides users through pipe design and system configuration for a FAAST aspiration system. Once the system is installed, PipeIQ enables continual configuration and system monitoring from anywhere in the world via the Internet using FAAST's onboard Ethernet connection.

Ease of Design

Using PipeIQ, a designer can complete the pipe network layout, verify hole sizes and detection sensitivity, and obtain a Bill of Material and Layout Report.

The software also includes a Pipe Wizard that can guide users through the pipe network design process. The wizard asks a series of questions about the area under protection and designs a pipe network tailored to the space. A great tool for inexperienced designers, the Pipe Wizard is also suitable for quickly designing a pipe network for less complex rectangular spaces and to create an initial layout for more complex spaces that will require additional design.

Ease of Use

After the system is commissioned, PipeIQ supports FAAST systems with trend graphs, reports, and data storage options. It also includes a robust built-in help guide that makes troubleshooting quick and easy.
